AccessData Known File Filter (KFF) Release Notes

March 2018 Update

Document Date: 03/09/2018

Introduction

This document lists information about this update of the Known File Filter (KFF).

New KFF Server / Cassandra

The Apache Cassandra database is used as the KFF Server.

This update includes a newer version of Apache Cassandra (3.11.2)

Background Information

When AccessData products versions 6.3 and 6.4 were released, they included Apache Cassandra (3.11.0).

Cassandra requires Java Version 8 64-bit. When 6.3 was released, the current version of Java 8 was update 152.

Java 8 update 161 was later released and this update did not work with Cassandra 3.11.0. (bug 13026)

This current 3.11.2 release of the Apache Cassandra database works with the 161update.

Updating Apache Cassandra to version 3.11.2

On the computer where you have Cassandra 3.11.0 installed, run the 3.11.2 version of **AccessData_Cassandra_Installer.exe** and complete the installation wizard.

This updates Cassandra and will also restart your Cassandra service.

Where to get more information

Use the following documentation resources to learn more about this product. Each document is available in PDF format in the download ISO file. The *User Guide* is also available through the *Help* menu in FTK.

The latest version of each document is available in the *Product Release* pane on the product download page:

http://accessdata.com/product-download

Document	Description
FTK Quick Installation Guide	Basic information about how to install and upgrade this and related products.
FTK Installation Guide	Information about how to install and upgrade this and related products.
User Guide	Information about how to use this product, including detailed technical information and instructions for performing tasks.
KFF Quick Install Guide and KFF installation files	For the most current KFF Server and KFF data installation files, as well as the *KFF Quick Install Guide*, visit the AccessData Product Downloads page: http://accessdata.com/product-download Expand the *Known File Filter (KFF)* section and then the *KFF Server* section.
